## (54) COMMUNICATION MONITOR SYSTEM

### (57)Abstract:

**PROBLEM TO BE SOLVED:** To resolve the problem that it is not easy for a user to examine detailed information of a communication error between a programmable controller which controls each device and a control means which gives a command to the programmable controller, because this examination needs deep knowledge about a communication packet.

**SOLUTION:** A communication monitor means is provided between the programmable controller and the control means to automatically take in and analyze the communication packet, and the result is stored in a table so that the part where error occurs can be discriminated.
